This is to certify that the below Yamada America pump models are made in compliance with food grade approved materials. All pump body materials that have direct contact with liquid are constructed of passivated 316 stainless steel. For soft parts (elastomers) that come in direct contact with liquid compliance is as follows:

PTFE (T) elastomers that have direct liquid contact are compliant with FDA 21 CFR 177.1550.

EPDM (E) elastomers that have direct liquid contact are compliant with FDA 21 CFR 177.2600.

TPEE (H) elastomers that have direct liquid contact are compliant with the Japanese Food Sanitation and regulations of the Ministry of Health and Welfare, Notification 370.

All wetted parts are food grade compliant. No silicon or silicon containing materials were used in the production of these pumps.
